

Maps

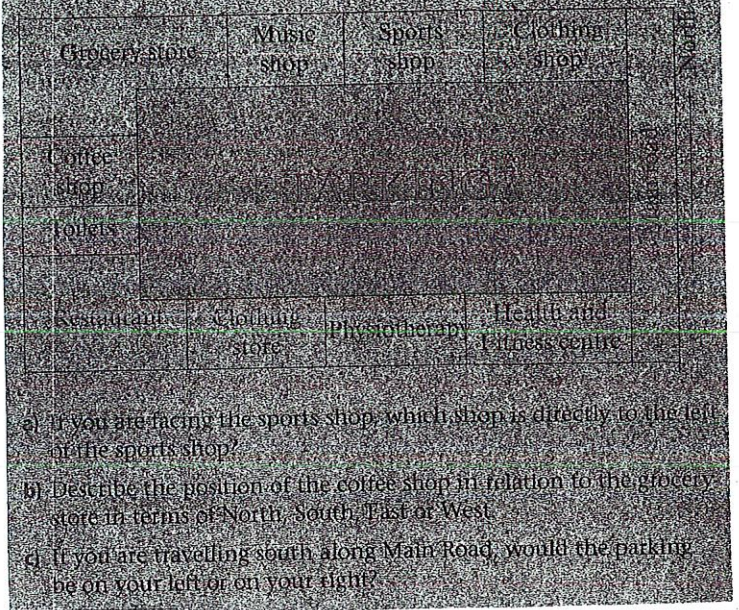

Exercise

Activity 7.1 Downloaded from Stanmorephysics.com map of a shopping centre

1. Use the map to answer the questions.

- Which place is East of the Tribal Council?
- Approximately how far is the hotel from the challenge area?
- Where would you be if you moved North from the hotel three blocks and then West one block?
- Where would you be if you move three blocks to the East from the camp and then North three blocks?
- Describe the shortest route from the water to the camp travelling along the grid lines and remaining on the island.

- If you are facing the sports shop, which shop is directly to the left of the sports shop?
- Describe the position of the coffee shop in relation to the grocery store in terms of North, South, East or West.
- If you are travelling south along Main Road, would the parking be on your left or on your right?

4. A map has a scale of 1 : 400.

Calculate the real distances represented on the map by:

- 8 cm
- $2\frac{1}{2}$ cm

5. A model is made using the scale 1 : 20.

The table gives details of the model and the real Moses Mabhidia Sport Stadium in Durban. Complete the table.

A model of the Moses Mabhidia Sport Stadium in Durban.

		Model	Real stadium
a)	length of the field	600 cm	
b)	height of the stadium		30 m
c)	height of entrance gate	20 cm	
d)	width of entrance gate		5 m
e)	width of field	450 cm	
f)	number of seats		70 000

6. A map has dimensions 25 cm by 37,5 cm.

The scale printed on it is 1 : 2 000.

The map is reduced in size to fit a space of 10 cm by 15 cm in a book.

- How must the scale of the map in the book be adapted?
- What are the dimensions on the map of the rectangular area on the ground?

Example

A map has a scale of 1 : 500 000.
What real distance is represented by 2 cm on the map?

Solution

- 1 cm represents 500 000 cm = 5 km
2 cm represents 10 km
2 cm on the map represents a real distance of 10 km.

Activity 7.2 Distances and maps

30 minutes

1. A model giraffe is made to a scale of 1 : 150.

What does this tell you about:

- the height of the actual giraffe
- the height of the model giraffe?
- the height of the actual giraffe if the model is 3,5 cm tall.

2. A map has the scale:

Use the scale bar to determine:

- how many centimetres on the map represent an actual distance of:
 - 20 m
 - 50 m
 - 100 m
- how many metres on the ground are represented on the map by:
 - $\frac{1}{2}$ cm
 - 8 cm
 - 20 cm

3. A map has a scale of 2 cm representing 1 km.

If two villages are 8 cm apart on the map, what is the actual distance between the villages?

TRIANGLES

1. Triangle \rightarrow shape with 3 sides and 3 angles.
2. Scalene triangle \rightarrow no equal sides, no equal angles.

3. Isosceles triangle \rightarrow 2 equal sides, 2 equal angles.

4. Equilateral triangle \rightarrow 3 equal sides, 3 equal angles.

5. Acute-angled triangle \rightarrow all angles are less than 90° .

6. Right-angled triangle \rightarrow one angle is 90° .

7. Obtuse-angled triangle \rightarrow one angle is greater than 90° .

8. The sum of the angles of a triangle is 180° .

$$\hat{A} + \hat{B} + \hat{C} = 180^\circ$$

9. The exterior angle of a triangle equals the sum of the interior opposite angles.

5. Angle m and n form a straight angle. Calculate the size of m and n .

8. Calculate the size of \hat{N} .

6. BCD is a straight line segment. Calculate the size of x .

9. DNP is a straight line. Calculate the size of x and y .

7. Calculate the size of x and then the size of \hat{H} .

QUADRILATERALS

1. Quadrilateral \rightarrow shape with 4 sides and 4 angles.
2. Diagonal divides a quadrilateral into 2 triangles.
3. The angles of a quadrilateral add up to 360° .

$$a + b + c + d = 360^\circ$$

4. Equal sides are marked with equal number of strokes.
5. Parallel lines are marked with equal number of arrows.

6. Square \rightarrow 4 equal sides and 4 equal angles (90°).
 \rightarrow opposite sides are parallel.

Find the length of all the **unknown sides** and **angles** in the following quadrilaterals. Give reasons to justify your statements. (Also recall that the sum of the angles of a quadrilateral is 360° .)

1.

4. The perimeter of RSTU is 23 cm.

2.

5. PQRS is a rectangle and has a perimeter of 40 cm.

3. ABCD is a kite.

CONGRUENCY

1. Congruent \rightarrow identical shapes \rightarrow same shape and size.

\rightarrow corresponding sides and angles are equal.

eg:

$$\triangle ABC \cong \triangle DEF :$$

$$AB = DE$$

$$\hat{A} = \hat{D}$$

$$BC = EF$$

$$\hat{B} = \hat{E}$$

$$AC = DF$$

$$\hat{C} = \hat{F}$$
