| 08 – 15/04 (6 days) | | | EUCLIDEAN GEOMETRY | Revise earlier work on the necessary and sufficient conditions for polygons to be similar. Prove (accepting results established in earlier grades) that a line drawn parallel to one side of a triangle divides the other two sides proportionally (and the Midpoint Theorem as a special case of this theorem). Prove (accepting results established in earlier grades): 4.1 that equiangular triangles are similar; 4.2 that triangles with sides in proportion are similar; and 4.3 the Pythagorean Theorem by similar triangles. 5 Solve similarity problems and prove riders. | | | | 32 | 49 |
| 05 – 06/05 (2 days) | | | CALCULUS | An intuitive understanding of the limit concept. Use limits to define the derivative of a function f at any x: f'(x) = lim f(x+h)-f(x)/h. Generalise to find the derivative of f at any point x in the domain of f, i.e., define the derivative function f'(x) of the function f(x). Understand intuitively that f'(a) is the gradient of the tangent to the graph of f at the point with x-coordinate a. | | | | 37 | 51 |
