This question paper consists of 6 pages

### INSTRUCTIONS AND INFORMATION

Read the following instructions carefully before answering the questions.

- 1. This question paper consists of 6 Questions.
- 2. Answer ALL the questions.
- Clearly show ALL calculations, diagrams and graphs that you have used in determining your answers.
- 4. Answers only will NOT necessarily be awarded full marks.
- 5. An approved scientific calculator (non-programmable and non-graphical) may be used, unless stated otherwise.
- 6. If necessary, answers should be rounded off to TWO decimal places, unless stated otherwise.
- 7. Diagrams are NOT necessarily drawn to scale.
- Number your answers correctly according to the numbering system used in this
  question paper.
- 9. It is in your own interest to write legibly and to present your work neatly.

### **QUESTION 1**

1.1 Solve for x:

$$1.1.1 \quad 2 - 3x = x - 6 \tag{2}$$

$$1.1.2 \quad 6x^2 - x - 15 = 0 \tag{3}$$

1.1.3 
$$3x^2 + x - 5 = 0$$
 (round off your answer to TWO decimal places) (4)

$$1.1.4 \quad (x-1)^2 > 9 \tag{4}$$

$$1.1.5 \quad \sqrt{2 - 7x} = 2 - x \tag{4}$$

1.2 Solve for x and y if they satisfy the following equations simultaneously:

$$x - 2y = 1$$

$$x^2 - 2xy + y^2 = 9 more physics.com (6)$$

1.3 Given:  $12^{x+1} = 36(6^x)$ 

1.3.1 Show that the equation can be written in the form: 
$$2^x = 3$$
 (3)

1.3.2 Solve for 
$$x$$
, correct to two decimal places (2)

[28]

### **QUESTION 2**

Consider the following number pattern: 6; 13; 22; 33; x; y; .....

- 2.1 Show that it is a quadratic number pattern (2)
- 2.2 Write down the values of x and y (2)
- 2.3 Hence determine the nth term as well as the 160th term (5)
- 2.4 Determine which term equals 397 (4)

[13]

### **QUESTION 3**

3.1 Given the arithmetic series: 5+9+13+...+401

Calculate:

- 3.1.1 The number of terms in the series (4)
- 3.1.2 The sum of the terms in the series (3)

3.2 Given the sequence: 2; x; 18; ....

Calculate x if this sequence is:

- 3.2.1 An arithmetic sequence (3)
- 3.2.2 A geometric sequence (4)
- 3.3 Given:  $\sum_{k=1}^{10} 3(2)_{i,anmore physics.com}^{1+k}$ 
  - 3.3.1 Write down the first three terms of the series (3)
  - 3.3.2 Determine the sum of the series (3)

[20]

### **QUESTION 4**

Given:  $f(x) = \frac{-4}{x-2} - 1$ 

- 4.1 Calculate the coordinates of the intercepts of the graph of f with the axes (5)
- 4.2 Sketch the graph of f, showing the asymptotes and the intercepts with the axes (3)
- 4.3 If the graph of f is shifted five units to the left and two units down, write down the equation of the new function obtained by this transformation. Use the form

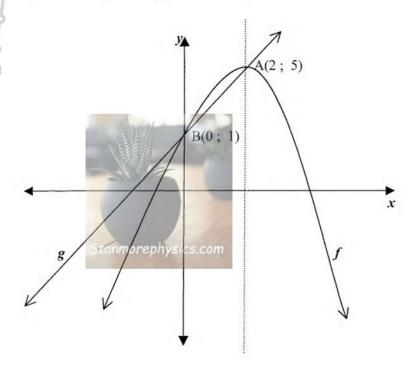

$$y = \dots (2)$$

4.4 What is the domain and the range of f(x) (2)

[12]

### **QUESTION 5**

In the diagram below, A(2; 5) is the turning point of the parabola f that cuts the y axis at B(0; 1). The straight line g passes through A and B.

Determine:

5.1 The equation of g in the form 
$$y = mx + c$$
 (4)

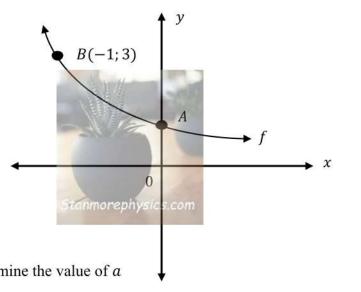

5.2 The equation of f in the form 
$$y = ax^2 + bx + c$$
 (4)

5.4 The values of x for which 
$$f(x) \ge g(x)$$
 (2)

[13]

### **QUESTION 6**

The sketch below represents the graph of  $f(x) = a^x$ . The point B(-1; 3) lies on the graph and A is the y intercept of f.

- 6.1 Determine the value of a (3)
- (2) 6.2 Determine the coordinates of A
- Determine the equation of  $f^{-1}$  the inverse of f, in the form  $f^{-1}(x) = \dots$ 6.3 (2)
- Sketch the graph of  $f^{-1}$ 6.4 (3)
- Determine the domain of  $f^{-1}$ 6.5 (2)
- For which value(s) of x will  $f^{-1}(x) \ge -1$ 6.6 (2)
