PHYSICAL SCIENCES: PHYSICS P1
SEPTEMBER 2026

MARKS: 150

TIME: 3 HOURS

This question paper consists of 19 pages including 3 data sheets.

INSTRUCTIONS AND INFORMATION

1. Write your name on the FOLIO PAPERS.
2. This question paper consists of ELEVEN questions. Answer ALL the questions on the FOLIO PAPERS.
3. Start EACH question on a NEW page on the FOLIO PAPERS.
4. Number the answers correctly according to the numbering system used in this question paper.
5. Leave ONE line between two sub questions, e.g. between QUESTION 2.1 and QUESTION 2.2.
6. You may use a non-programmable calculator.
7. You may use appropriate mathematical instruments.
8. Show ALL formulae and substitutions in ALL calculations.
9. Round off your FINAL numerical answer to a minimum of TWO decimal places.
10. Give brief motivations, discussions, etc. where required.
11. You are advised to use the attached DATA SHEETS.
12. Write neatly and legibly.

QUESTION 1: MULTIPLE CHOICE QUESTIONS

Various options are provided as possible answers to the following questions. Each question has only ONE correct answer. Choose the correct answer and write only the letter (A–D) next to the question number (1.1 to 1.10) on the FOLIO PAPER, e.g. 1.11 E.

- 1.1 A car is moving on a horizontal road at constant velocity.
Which ONE of the following statements is true?

A The forces acting on the car are not in equilibrium.
B There are no forces acting on the car.
C The resultant force acting on the car is zero.
D There is no frictional force acting on the car.

(2)

- 1.2 A 3 kg iron sphere and a 1 kg aluminium sphere with the same diameter fall freely from the roof of a tall building. Ignore the effects of friction.

When the spheres are 5 m above the ground, they have the same ...

A momentum.
B acceleration.
C kinetic energy.
D potential energy.

(2)

- 1.3 Two identical bullets, **X** and **Y**, with identical velocities strike a steel block and a wooden block respectively.
 Bullet **X** bounces 180° back from the steel block.
 Bullet **Y** penetrates and becomes embedded inside the wooden block.

Which ONE of the following momentum vs time graphs represents the above scenario the best?

(2)

- 1.4 Which ONE of the following statements about conservative forces is false?

Conservative forces ...

- A cannot change the potential energy of a system.
- B do not change the mechanical energy of a system.
- C can convert potential energy into kinetic energy.
- D do work which only depends on the initial and final positions of an objects motion.

(2)

1.5 The net work required to bring a moving object to rest is equal to the ...

A increase in kinetic energy of that object.

B decrease in potential energy of that object.

C decrease in inertia of that object.

D decrease in kinetic energy of that object.

(2)

1.6 The siren of an ambulance, moving in front of a car, emits sound waves of frequency f . Both vehicles are travelling at the same constant velocity. The frequency of the sound heard by the driver of the car is....

A f .

B zero.

C greater than f .

D smaller than f .

(2)

1.7 Two point charges of $+2\text{ nC}$ and -2 nC , respectively at point **S** and **T**, are located on the same straight line as shown in the diagram below.

Which ONE of the following correctly represents the directions of the RESULTANT electric fields at **S** and at **T**?

	DIRECTION OF THE RESULTANT ELECTRIC FIELD AT POINT S	DIRECTION OF THE RESULTANT ELECTRIC FIELD AT POINT T
A	Right	Left
B	Left	Right
C	Left	Left
D	Right	Right

(2)

- 1.8 Two resistors, **X** and **Y**, are connected in parallel to a battery as shown in the diagram. The battery with emf **V** and negligible internal resistance. How does the power dissipated in resistor **X** compare to the power dissipated in resistor **Y**?

- A The power dissipation in **Y** is greater than the power dissipation in **X**.
- B The power dissipation in **X** is greater than the power dissipation in **Y**.
- C The power dissipation in **X** is the same as the power dissipation in **Y**.
- D The power dissipation in both resistors is equal to 0 W. (2)
- 1.9 Which ONE of the energy conversions below takes place when a DC motor is in operation?
- A Kinetic to electrical
- B Heat to mechanical
- C Electrical to mechanical
- D Mechanical to electrical (2)
- 1.10 The work function of a metal is $W_0 = hf_0$. If this metal is illuminated with light of frequency $3f$, the maximum kinetic energy of the photoelectrons will be ...
- A $3hf + hf_0$
- B $3hf - hf_0$
- C $3hf + 2hf_0$
- D $3hf - 2hf_0$ (2)

QUESTION 2 (Start on a new page.)

A box with a mass of 70 kg is pulled up an incline at a constant acceleration of $0,5 \text{ m} \cdot \text{s}^{-2}$. The incline makes an angle of 60° with the horizontal. The rope is parallel to the slope. The kinetic frictional force between the box and the surface is 15 N.

- 2.1 Define kinetic frictional force. (2)
- 2.2 Draw a labelled free body diagram for the box. (4)
- 2.3 Calculate the:
- 2.3.1 Magnitude of the parallel component of gravitational force acting on the box (3)
- 2.3.2 Tension in the rope (5)
- 2.4 The slope now becomes less steep and is now at an angle of 40° to the horizontal. What effect will this have on the following? Choose from INCREASES, DECREASES or REMAINS THE SAME.
- 2.4.1 Coefficient of kinetic friction (1)
- 2.4.2 Tension in the rope. Give a reason for the answer. (2)
- [17]**

QUESTION 3 (Start on a new page.)

Part of the position-time graph for a ball thrown vertically upwards from the ground to the top of a 48 m tall building is shown below. The graph is not drawn to scale.

The ball bounces on the roof of the building and reach a maximum height of 8 m above the building.

Ignore the effect of air resistance.

- 3.1 Define the term *projectile*. (2)
- 3.2 Calculate the magnitude of the speed at which the ball:
- 3.2.1 Is thrown upwards (3)
- 3.2.2 Hits the roof (3)
- 3.3 Draw a velocity time graph for the whole movement of the ball (3)
- [11]**

QUESTION 4 (Start on a new page.)

In a crash test, a car of mass 1 500 kg collides with a wall and rebounds. The initial and final velocities of the car are $100 \text{ km}\cdot\text{h}^{-1}$ west and $8 \text{ km}\cdot\text{h}^{-1}$ east respectively.

- 4.1 Define Newton's second law of motion in terms of momentum. (2)
- 4.2 Calculate the force exerted by the wall on the car if the collision last for 0,2 s. (3)
- 4.3 How will the magnitude of the force exerted on the car be affected if the time interval of the collision remains 0,2 s, but the car does NOT BOUNCE OFF the wall? Write down only INCREASES, DECREASES or REMAINS THE SAME. (1)
- 4.4 Differentiate between *elastic* and *inelastic collisions*. (2)
- 4.5 Two cars, one WITH and one WITHOUT an airbag, each with a mass of 1 500 kg were used in a car factory, to investigate the injuries on drivers. Graphs **A** and **B** below represent the results obtained from the investigation, as shown below. Study the graphs and answer the questions that follow.

- 4.6.1 Which graph represent the results of a car WITH an airbag? Write down only GRAPH **A** or GRAPH **B**. (1)
- 4.6.2 Explain the answer in QUESTION 4.6.1. (2)

[11]

QUESTION 5 (Start on a new page.)

A man shoots an arrow, mass $0,15\text{ kg}$, from a crossbow into a wooden block, mass $4,85\text{ kg}$, which hangs from a light inextensible string as shown in the diagram below. After the collision, the arrow is stuck in the wooden block. The block and arrow now swing upwards and reach a vertical height of $0,3\text{ m}$ above the initial position of the block. Ignore air friction on the block and arrow.

- 5.1 State the law of conservation of linear momentum in words. (2)
- 5.2 Calculate the:
- 5.2.1 Potential energy of the arrow and block at the height of $0,3\text{ m}$ (3)
- 5.2.2 Velocity of the block and arrow immediately after the collision. (4)
- 5.2.3 Magnitude of the velocity with which the arrow collides with the block (4)
- [13]**

QUESTION 6 (Start on a new page.)

A siren on a stationary dock emits a sound of frequency 600 Hz. A speedboat moves away from the dock, starting from rest and accelerates at $2 \text{ m}\cdot\text{s}^{-2}$ as shown in the diagram below. Take the speed of sound in air as $340 \text{ m}\cdot\text{s}^{-1}$. Ignore effects of friction.

- 6.1 State *Doppler effect* in words. (2)
- 6.2 Calculate the frequency heard by the person on the boat after 5 seconds when the boat is now moving at a constant velocity. (6)
- 6.3 How is the pitch changing over the time?
Choose from INCREASE, DECREASE or REMAIN THE SAME?
Give a reason for the answer. (2)
- 6.4 Spectral lines of star X at an observatory are observed to be red shifted.
Explain the term red shifted in terms of wavelength. (2)

(2)

QUESTION 7 (Start on a new page.)

The spheres **A**, **B** and **C** are arranged at the corners of a right-angled triangle, as shown in the diagram below. The charges on **B** and **C** are $+2\ \mu\text{C}$ and $-2\ \mu\text{C}$ respectively and the magnitude of the charge on **A** is $6\ \mu\text{C}$. The distances **AB** and **AC** are r respectively. The charge **A** experiences a resultant electrostatic force of $0,12\ \text{N}$ northwest.

- 7.1 State Coulomb's law in words. (2)
- 7.2 Without calculation, identify the nature of the charge on **A**. Choose between POSITIVE or NEGATIVE. (1)
- 7.3 Draw a force diagram of the electrostatic forces exerted on **A** due to the charges at **B** and **C**. (2)
- 7.4 Calculate the value of r . (6)
- [11]**

QUESTION 8 (Start on a new page.)

- 8.1 A metal sphere with a charge of $+6 \mu\text{C}$ is suspended from a wooden beam by means of a non-conducting string as shown in the diagram below.

- 8.1.1 Define the term *electric field at a point* in words. (2)
- 8.1.2 Draw a diagram that shows the electric field pattern around the sphere. (2)
- 8.1.3 Calculate the number of electrons added to or removed from the sphere. Assume that the sphere was initially neutral. (3)
- 8.2 The magnitude of the electric field is $100 \text{ N}\cdot\text{C}^{-1}$ at a point which is 60 cm away from an unknown charge on sphere Q as shown in the diagram below.

Calculate the distance from sphere Q at which the magnitude of the electric field is $50 \text{ N}\cdot\text{C}^{-1}$.

QUESTION 9 (Start on a new page)

Three resistors and a 64 W electrical apparatus are connected to a 60 V battery with an internal resistance r as shown in the diagram below. The ammeter A_1 has a reading of 2,5 A. Switch S is open.

- 9.1 What is the function of the apparatus V_1 ? (1)
- 9.2 How does the reading on ammeter A_1 compare to the reading on ammeter A_2 ? Choose from LARGER THAN, SMALLER THAN or THE SAME AS. Explain the answer (2)
- 9.3 Calculate the:
- 9.3.1 Resistance of the electrical apparatus (3)
- 9.3.2 Current passing through the battery (4)
- 9.3.3 Voltmeter reading V_1 (3)
- 9.4 Switch S is now closed. How does the reading on the ammeter A_1 compare to the reading on ammeter A_2 ? Choose from LARGER THAN, SMALLER THAN or THE SAME AS. Explain the answer. (2)

[15]

QUESTION 10 (Start on a new page)

- 10.1 An alternating current (AC) generator is installed on a farm and the following emf versus time graph can be drawn from results obtained. The root mean square of the current is 5% of the root mean square of the voltage.

- 10.1.1 What is represented by the 94,3 V on the graph? (1)
- 10.1.2 What changes must be made to the above AC generator to change it to a DC generator? (1)
- 10.1.3 Calculate the average power of this generator. (4)
- 10.2 A search light with an ohmic bulb is marked 90 V: 56 W.
- 10.2.1 Calculate the resistance of the bulb. (3)
- 10.2.2 The search light is now connected to the AC generator described above in QUESTION 10.1. How will the brightness of the bulb be influenced? Choose from MORE BRIGHT, LESS BRIGHT or THE SAME. Explain the answer. (2)

[11]

QUESTION 11 (Start on a new page)

- 11.1 A group of learners performs an investigation to compare the effect of two types of radiation on the emission of photoelectrons from zinc in order to explain the photo electric effect. They place a zinc plate on top of the disc of a negatively charged electroscope. Ultraviolet and red light are shone alternately onto the zinc plate as shown below, with the electroscope fully charged in each case.

They record the following observations:

RADIATION	OBSERVATION
Ultraviolet light	Gold leaves collapse
Red light	No effect on the movement of gold leaves

- 11.1.1 Define the term *photoelectric effect* in words. (2)
- 11.1.2 What conclusion can be drawn from this investigation? (2)
- 11.1.3 Write down the energy conversion in the photo electric effect. (2)
- 11.2 The learners have access to the following information:

Work function of zinc	$6,88 \times 10^{-19} \text{ J}$
Wavelength of ultraviolet light	$2,7 \times 10^{-7} \text{ m}$
Wavelength of red light	$6,99 \times 10^{-7} \text{ m}$

- 11.2.1 Use a calculation to explain why red light fails to emit photoelectrons from the surface of the zinc plate. (4)
- 11.2.2 Calculate the momentum of a photoelectron of ultraviolet light just after it leaves the zinc surface. (5)
